

## VerifyYou™: Remote Verify

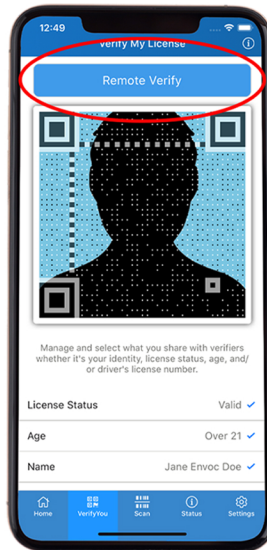

In order to remotely verify your identity, you must have an LA Wallet account with a valid Louisiana license or ID added in the app.

Once a business or organization representative requests to verify your identity remotely, they will provide a unique code.

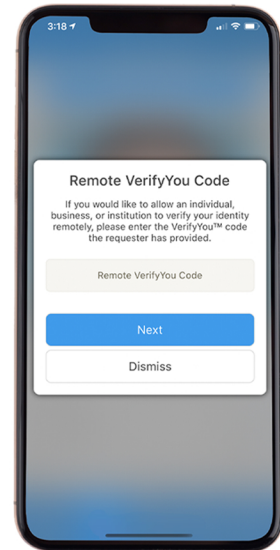

To enter the code, first open your LA Wallet app and select the "VerifyYou" button from the homescreen.

Next, select "Remote Verify."

Enter the code provided by the business or organization representative.

You will be provided the chance to review the requestor's name, affiliation, and the purpose of the remote identity verification.

Confirm that the information the representative has provided and the information retrieved with the code are consistent.

You may approve, reject, or dismiss the remote identity verification. If you choose to approve verification, all of the information requested will be sent to the representative.

If you have any questions, please contact LA Wallet support.
